

CHAU VU

Product Engineer | Transforming Legacy Systems into Modern Products

Hamburg, Germany · +49 179 4195 394 · chauvu8080@gmail.com

Portfolio: kiwillvu.wixsite.com/chauvu-portfolio · GitHub: github.com/chauvu183

SUMMARY

Product engineer who turns legacy systems into modern products. I work across the whole product surface — UX and design systems, Angular and .NET/Java engineering, and the data and AI that make a product measurably better. I came to engineering through design, which is why I own features end-to-end: from the problem and the interface, through the API, to the analytics that prove it worked. Strong software-engineering foundation (Computer Science degree, enterprise microservices at Kuehne + Nagel) paired with a designer's eye and a habit of shipping, measuring, and iterating.

TECHNICAL SKILLS

Product & Design: Design systems, design tokens, Storybook, Figma, UX research (interviews, surveys, fake-door tests), prototyping, component API design

Frontend: Angular (Standalone Components, Signals), TypeScript, RxJS, Tailwind CSS, responsive UI

Backend & APIs: .NET / C#, Java / Spring Boot, Node.js (NestJS), REST, API Gateway design, server-side validation

Data & AI: Databricks (Lakeview, Spark SQL, Delta Lake), Fivetran, analytics instrumentation, AI semantic / vector-search integration, AI-assisted usage analysis

Quality & Delivery: Cypress, Playwright, Vitest, CI/CD (Jenkins), Docker, OpenShift, Agile / Scrum (PSD I)

PROFESSIONAL EXPERIENCE

softfair GmbH

Software Engineer (Product & Platform)

Hamburg, Germany

Nov 2023 – Present

Insurance comparison & quotation platform, plus its internal analytics platform.

- **Rebuilt** the entire frontend of softfair's internal Insights platform on a design system I built from scratch (tokens, M3 theme, component library) — turning a flat Angular app into a modern, modular architecture (standalone bootstrapping, lazy loading).
- **Built** an interactive Jira analytics dashboard on Databricks Lakeview (7 pages, 18 datasets, 30+ visualizations) from Fivetran-synched data, with custom business-day cycle-time and sprint-velocity metrics for retros and planning.
- **Shipped** an AI semantic vector-search profession finder that maps a broker's free-text input to each insurer's taxonomy; designed the relevance/scoring UX and iterated it from user-interview feedback.
- **Redesigned** the KFZ eVB search end-to-end — UX concept, rebuilt UI, new REST APIs, and usage analytics analyzed with AI — closing a build-measure-learn loop.
- **Co-designed and built** a shared component library (25+ Storybook-documented components) adopted across 5 insurance modules; delivered full-stack features extending a .NET/C# print-engine API and its Angular frontend.
- **Ran** UX research and fake-door tests to validate features before building them; stabilized flaky Cypress/Playwright E2E suites.

Kuehne + Nagel International AG

Software Engineer (Full-time)

Hamburg, Germany

Mar 2022 – Oct 2023

Jupiter — an enterprise logistics monitoring platform for a global freight company.

- **Built** the Angular frontend for Jupiter, giving operations teams real-time visibility into cross-system EDI data flows across 5+ internal systems — helping cut incident resolution from hours to minutes.
- **Engineered** a custom HTTP interceptor and mock-data layer enabling fully offline UI development and faster onboarding; rendered complex directed-graph message flows in SVG.
- **Co-developed** an API Gateway securing internal Jupiter APIs, and refactored legacy frontend code for scalability and performance across a Spring Boot / PostgreSQL / OpenShift microservice architecture with Jenkins CI/CD.

RE/SWITCH GmbH*Frontend Developer / UI Designer (Working Student)***Hamburg, Germany***Dec 2019 – Jan 2022*

- **Built** web UIs for an information-distribution platform by customizing the browser-based flow editor Node-RED (Node.js, HTML, SCSS, JavaScript).
- **Designed** interactive prototypes for a clinical data-distribution and alarm system (Helios Klinik), aligning engineering and stakeholders before build.

Sen Company Limited*Graphic Designer (Working Student / Freelance)***Hanoi, Vietnam***Jun 2016 – 2021*

- **Designed** packaging, posters, and brochures for international (Lotte, Ottogi) and domestic markets using Adobe Creative Suite.

EDUCATION

Hamburg University of Applied Sciences (HAW Hamburg)*B.Sc. Computer Science***Hamburg, Germany****Arena Multimedia Design Institute***Arena Multimedia Design Program***Hanoi, Vietnam****CERTIFICATIONS**

- Professional Scrum Developer I (Scrum.org)
- Google UX Design Professional Certificate (Google)
- UX & Web Design Master Course (Udemy)
